“We clean up the competition”

In an era of expanding environmental demands and rising waste management cost, a new leader in waste recovery and disposal services has emerged, Midstate Environmental Services. We have over 25 years of experience in environmental services. Our growth and success is mainly due to our customer satisfaction and the combined experience and leadership of the owner, managers, and employees of Midstate.

Midstate Environmental Services is engaged in the recovery of used/waste oil which is blended into a off-spec burner fuel and used for energy recovery, the recovery and proper disposal of used oil and fuel filters, the recovery and proper disposal of used anti-freeze, the recovery and proper disposal of water and the recovery and proper disposal of grit & grease trap waste.

### Texas Locations and Capabilities

Midstate Environmental Services home office is located at 2203 Tower Road in Robstown, TX. Our billing address and mailing address is: P. O. Box 261180, Corpus Christi, TX

78426-1180. Midstate also has other facilities located in Waco, TX, Luling, TX, and in LaFeria/Harlingen, TX.

Midstate Environmental Services has been a marketer of industrial burner fuel since 2002, blending and transporting over five (5) million gallons of fuel per year.

Midstate Environmental Services can supply an unlimited quantity of fuel to locations all across the great state of Texas. We can also supply fuel tanks at your locations if needed.

Midstate Environmental Services also provides used oil and used oil filter pick up services. We can schedule your place of business on weekly, bi-weekly, or monthly pick up rotation where we will come by, pick up your used oil and filters as well as replace the used filter barrels.

Midstate Environmental Services is also one of the few companies in Texas to have a grit/grease trap transporter permit. Grease trap waste is collected and transported to a company in San Antonio where the waste is recycled into such uses as fertilizers and mulches. Grit trap waste is considered a liquid waste. In order to properly and legally dispose of this waste, it needs to be profiled prior to disposal with BFI.

Midstate Environmental Services would provide an

Environmental technician to collect a representative sample of the waste, ship the sample to a certified lab, interpret the analysis data and work with the disposal company to have your waste properly profiled for acceptance at the disposal facility. These profiles are typically effective for up to two (2) years.

### Types of Services
